

## WASTE

The figures outlined below include waste from client contracts and Arcus occupied office sites where Arcus are responsible for the management of waste and estimations for Arcus Estates sites that the landlord is responsible for managing waste.

*Table 1. Waste by composition in metrics tons (t)*

	Waste Generated	Waste Diverted from Disposal*	Waste Directed to Disposal**
Total	675.78	646.99	11.87
Non-hazardous Waste	649.34	625.5	11.83
Hazardous and WEE waste	26.44	21.5	0.04

\* Only waste that we are certain has been diverted from disposal is included in these figures.

\*\* Only waste that we are certain has been landfilled is included in these figures.

*Table 2. Waste diverted from landfill, in metric tons (t)*

	Total
Hazardous and WEE waste	26.44
Non-hazardous Waste	649.34
Total	675.78

Table 2 summarises data for which the third-party waste management supplier has confirmed diversion from landfill but has not specified the recovery or disposal operation involved.

## AIR QUALITY

Arcus main source of air pollutants comes from the van fleet, followed by our grey fleet (business travel in personal and hire cars) and a minor contribution from natural gas combustion in boilers for heating.

Emissions Type	Quantity (kg)
NOx	49,470
SOx	2.5
Particulate Matter (PM10)	601
Particulate Matter (PM2.5)	601
Volatile Organic Compounds (VOC)	1,451

The transport figures were calculated based on published emission factors from the National Atmospheric Emissions Inventory for road transport. The boiler emission factors were from the DEFRA/European Environment Agency

## HEALTH AND SAFETY

This data relates to injuries and ill-health of Arcus FM employees and contractors working on behalf of Arcus (where reported to Arcus).

GRI 403, is an American standard, therefore the required criterion slightly differs to that utilised within the UK. Statistics detailed relate to UK HSE reporting requirements. It details RIDDORs as defined within the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 2013.

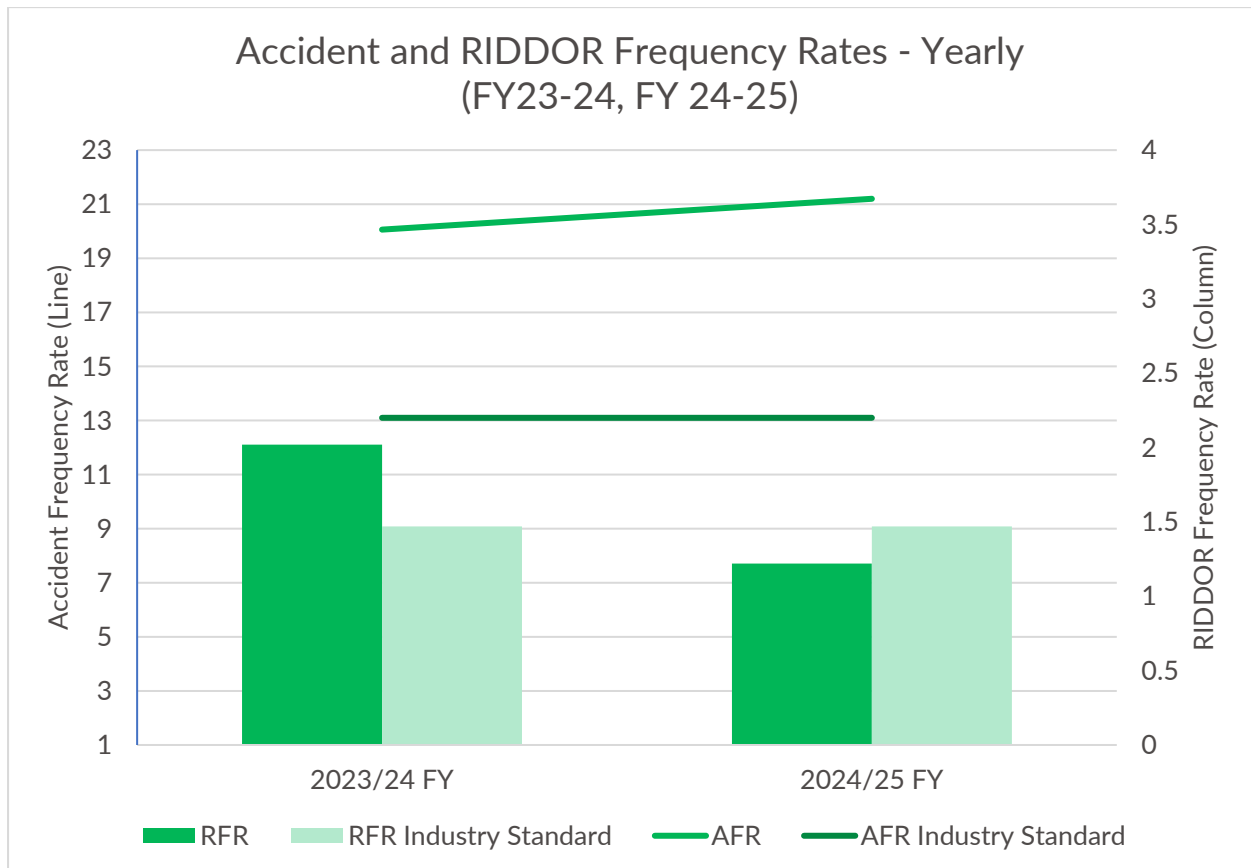

It also includes non RIDDOR reportable incidents where injury occurred whilst undertaking work activities, including driving and events where harm was not caused but had potential to cause injury or ill health, including dangerous occurrences (near misses & hazard spots).

Ill health includes diseases, illnesses, & disorders, including mental health. Information provided relates to reports of ill health following exposure to workplace hazards.

The Frequency rate is calculated as  $AFR = (\text{Accident (incl. RIDDOR)} / \text{Hours Worked}) \times 1,000,000$ .

The below table shows incident group statistics. There have been no fatalities. Hours worked slightly differ for both years. 2024/2025 recorded 5,112,998 hours, with 5,067,519 recorded in 2023/2024.

Year	Hours Worked	RIDDORs	Accidents	AFR	RFR	AFR Industry Standard	RFR Industry Standard
2023/24 (FY)	5,068,519	10	90	20.06	2.02	13.1	1.47
2024/25 (FY)	5,112,998	7	85	21.21	1.22	13.1	1.47

## GRI DATA APPENDIX

Several Global Reporting Initiative (GRI) standards, and parts of their content, have been selected and referenced when compiling this report to disclose specific sustainability information, however a full report has not been prepared in accordance with all GRI standards.
